

- EDF Renewables plans to submit the proposed Upper Afton Renewable Energy Centre into the Nova Scotia Rate Base Procurement Request for Proposal that will be released in the upcoming weeks. The Project seeks to be awarded with an opportunity to execute a Power Purchase Agreement with Nova Scotia Power Inc. (NSPI) for the sale of renewable electricity.
- If approved, the 90 MW Project will interconnect to NSPI's existing 230 kilovolt transmission line running across the project area.
- The Project is located south of the community of Upper Afton in County of Antigonish & Guysborough in Nova Scotia and will include approximately 16 to 17 turbine locations.
- The proposed Upper Afton Renewable Energy Centre is in the early stages of planning; therefore, all project information is preliminary.
- EDF Renewables / Upper Afton Renewable Energy Centre will host more public or virtual meetings as the project planning continues.

We have created a virtual open house website where you can learn more about the project, such as:

- Updates to the proposed project
- The permitting and engagement processes, including timelines
- Benefits to the local community
- Construction and operations
- And more

You can also ask questions and share your feedback with the project team through the project website, through the virtual open house online platform or via email.

Access to the virtual open house anytime here:
<https://bit.ly/UpperAfton>

We look forward to connecting with you!
